About the Seminar

Star Marine PR is pleased to announce its annual maritime seminar in Singapore, a global hub for the shipping industry. This year, we will host the highly anticipated “Future Green Shipping & Digital Global Seminar” on Thursday, July 17, at The Pavilion Hall, Conrad Centennial Hotel by Hilton. The core theme of this year’s seminar is “Energy Transition and New Fuel Adoption in the Shipping Industry, the Potential of Next-Generation Wind-Assisted Propulsion system, and the Role of Digital Technologies.” These innovations are not only vital for achieving Net Zero goals but also contribute significantly to reducing operational costs, enhancing onboard maintenance, and ensuring safe navigation. Making timely and strategic decisions today requires more than just the shipowner's commitment. It calls for comprehensive understanding and detailed planning from the newbuilding stage onward.

The seminar will open with an in-depth market outlook session, featuring expert analysts who will provide the latest insights into global energy trends and regional market developments in Europe, Asia, and North America—especially tailored for shipowners, operators of high-value vessels such as tankers, financiers, and traders.

Following this, leading classification societies and our pioneering clients in green and digital solutions will present cutting-edge technologies and practical applications to address the industry’s evolving challenges.

We warmly invite you to join (sponsor and speaker) us for this forward-looking event.

***The seminar will be in English only**
